Professional Summary

Strategic **Senior QA Engineer & Technical Business Analyst** with 7 years of experience in functional and advanced automation testing across web and mobile platforms. Proven track record in bridging the gap between business requirements and technical execution by conducting rigorous requirement analysis and technical feasibility studies. Expert in designing robust test strategies and scalable automation frameworks. A collaborative leader skilled in mentoring teams and maintaining comprehensive business documentation to ensure high-quality software delivery in Agile environments.

Technical Skills

- Expert in test automation using Playwright, with strong skills in TypeScript, JavaScript, Java, Bash, and SQL.
- Proficient in API testing with Postman, Newman, REST Assured, and Karate DSL.
- User Story Writing, Acceptance Criteria Definition, BRD/FRD Documentation, AS-IS/TO-BE Analysis, Gap Analysis, Risk Assessment, Technical Feasibility Studies, Change Impact Analysis, and Stakeholder Management.
- Knowledgeable in CI/CD tools (GitHub Actions, Jenkins, Bitbucket Pipelines).
- Experienced in manual and exploratory testing, including test planning, defect tracking, and reporting.
- Familiar with Agile/Scrum methodologies, Jira, and Bitbucket.
- Strong communication and experience in mentoring junior engineers.

Work Experience

DataCrunch - Software QA Consultant (Part-Time)

June 2026 - Present

- Conduct structured regression testing across core modules to validate system stability following iterative releases, ensuring zero critical defects reach production.
- Lead end-to-end testing of AI agent workflows prior to production deployment, validating intelligent behavior, edge case handling, and response accuracy across defined scenarios.
- Review and validate test cases against business requirements and acceptance criteria, identifying gaps in coverage and ensuring alignment with functional specifications before sign-off.
- Execute pre-launch E2E test cycles across web and API layers, collaborating with development teams to triage, prioritize, and resolve blocking defects within release timelines.

Tygrlabs - Sr. Software QA & Technical Business Analyst

August 2025 - Present

- Establish QA standards and best practices, define comprehensive test strategies, plans, and cases to collaborate with cross-functional teams to audit requirements, identifying logical loopholes and assessing technical feasibility to mitigate risks before development begins.
- Execute a hybrid role leading QA operations and Technical Business Analysis, bridging the gap between stakeholder vision and technical execution to ensure 100% alignment across the SDLC.
- Maintain comprehensive business documentation as a "single source of truth" while establishing QA standards and mentoring teams to deliver high-quality, data-driven software solutions.

Cefalo Bangladesh Ltd - Software QA Engineer I

November 2022 - July 2025

- Developed and maintained a robust API automation suite using Spring Boot, Java, and Karate, reducing API-related defects by 30%. Designed and executed 200+ API test cases, improving role-specific coverage for user and admin roles by 40%.

- Implemented continuous monitoring for automated tests, cutting issue detection time by 50% and enhancing system stability. Streamlined defect management using JIRA and GitHub, leading to an 85% bug resolution rate within project deadlines.

Truck Lagbe Ltd. - Quality and Operation Engineer

August 2021 - October 2022

- Conducted requirement analysis and executed 100+ test cases, ensuring 95% test coverage and early detection of critical defects. Performed API and performance testing across local and live environments, reducing API-related issues by 30% and enhancing system reliability.
- Automated API testing using Java and Rest Assured, increasing test efficiency by 40% and streamlining quality assurance processes.

Walton Digi-Tech Industries Ltd. - Software QA Engineer

November 2019 - July 2021

- Documented and reviewed requirements, implemented detailed test plans, and optimized over 100 test cases to achieve 95% coverage; conducted performance testing and field analysis of network parameters, improved system performance by 20% and researched and evaluated mobile camera performance, developing testing measures that enhanced functionality and usability by 15%.

Education

B.Sc. in Computer Science & Engineering

East West University

Dhaka, Bangladesh

2015 -2019

Certification

- ISTQB Certified Tester (CTFL) | 2019
- **ACMP 4.0** | IBA, DU | 2025

Professional Interest

- Test Automation Architecture - building scalable, maintainable frameworks that reduce manual regression overhead.
- AI & LLM Quality Assurance - validating AI agent behavior, prompt reliability, and edge case robustness in production systems.
- Business Analysis & Requirement Engineering - translating ambiguous stakeholder needs into precise, testable acceptance criteria.

Key Achievements

- Reduced API-related defects by 30% and improved test coverage by 40% through a robust automation suite at Cefalo Bangladesh.
- Achieved an 85% bug resolution rate within project deadlines by streamlining defect management workflows using JIRA and GitHub.
- Cut issue detection time by 50% through implementation of continuous monitoring for automated test suites.
- Ensured 95% test coverage across multiple projects by designing and executing comprehensive test plans, enabling early detection of critical defects.
- Bridged a consistent gap between stakeholder vision and technical execution across 6+ years, delivering 100% SDLC alignment in Agile teams.
